Drug storage at Puskesmas is often faced with various challenges that can affect the availability, safety, and quality of drugs given to patients. The challenges that may be faced in the management of drug storage at the Puskesmas are limited infrastructure and drug storage facilities, limited human resources (HR) and lack of knowledge and skill in drug management and ineffective drug stock monitoring. This research aims to find out how the suitability of drug storage management at Puskesmas is based on the Regulation of the Minister of Health of the Republic of Indonesia Number 74 of 2016 concerning Pharmaceutical Service Standards at Puskesmas. The design of this research is article resume. Researchers search for manuscripts through official databases and library sources relevant to research topics. The database used is Google Scholar. At this stage literature search uses online databases on several portals, namely Google Scholar (Indonesia). The conclusion from the results of observations on the suitability of drug storage management in Health centers in terms of infrastructure and facilities as well as the arrangement of drug storage, and drug quality control is accordance with the Regulation of the Minister of Health of the Republic of Indonesia Number 74 of 2016 concerning Pharmaceutical Service Standards at Puskesmas
