

ABSTRACT

KAJIAN KELENGKAPAN RESEP PSIKOTROPIKA DAN NARKOTIKA DI RAWAT INAP RUMAH SAKIT X SURABAYA

Rhisma Rahmadani Eka Mardina

The administrative aspect of the completeness of the recipe is very important because it reduces the risk of many errors that will occur. The purpose of this study was to determine the completeness of the administration of psychotropic and narcotic prescriptions in order to add insight to the X Hospital in Surabaya and pharmacists to reduce the risk of medication errors. The research method used was a total sampling method which was retrospectively observational. The total research prescriptions for the period July to December 2022 were 416 psychotropic prescriptions and 329 narcotic prescriptions. The results of the completeness of the psychotropic prescription were 100% of the patient's name, 87% of the patient's address, 97% of the patient's age, 90% of the doctor's name, 90% of the doctor's SIP, 95% of the doctor's initials, date of prescription 96%, and unit of origin of the prescription 99%. Meanwhile, the results of the completeness of the narcotics prescription were 100% patient name, 82% patient address, 96% patient age, 87% doctor's name, 87% doctor's SIP, 91% doctor's initials, 96% date of prescription, and 99% prescription unit of origin. The incompleteness of prescription administration on the patient's identity was highest, namely the address of the patient with a percentage of 13% of psychotropic prescriptions and 18% of narcotic prescriptions. The highest number of incomplete prescription items on doctor's identity was found in the doctor's name and doctor's SIP with the same percentage, namely 10% psychotropic prescriptions and 13% narcotic prescriptions. Suggestions for doctors, nurses and pharmacists to socialize regularly to remind them in prescribing drugs, especially psychotropic and narcotic prescriptions.
