

ABSTRACT

(LITERATURE REVIEW)

OBSERVATION STUDY OF DRUG MANAGEMENT IN PHARMACY

Ulik Kurniawati

An advanced and developing pharmacy cannot be separated from good medication management is planning and getting medication step by step an important initial step in determining success Also because it makes sense to coordinate things during the Requirements planning phase procurement with available funds. Management of drug management is lacking either will result in stagnant drug supplies (excess drug supply) and stockout (lack or empty drug supply). Medicines that are stagnant have the risk of expiration and damage if not stored properly

This research method is a literature review. Researchers conducted a search of manuscripts through official databases and library sources relevant to the research topic. The databases used include Indonesia One Search and Google. Search for manuscripts that are found and relevant, namely by means of a systematic search process from libraries and online catalogs, subject area encyclopedias, periodical indexes, and abstracts (scanning), identifying important information or ideas by reading quickly and carefully, potential material that is suitable for researchers (skimming), information organizing techniques (mapping).

The results of a literature review study of 3 articles show that Drug management in pharmacies must be carried out with a good and appropriate management system so that it can help facilitate pharmacy managers or employees in recording, distributing and controlling drugs more precisely. A good system quality will increase enthusiasm for its use, while a system quality that is perceived as poor as perceived by users of the drug supply management information system will reduce the level of its use.
