

ABSTRACT

IDENTIFICATION MEDICATION ERROR IN PHASE PRESCRIBING AT BUDURAN CENTER SIDOARJO

Nanda Septia Dwi Siswandari

According to The National Coordinating Council for Medication errors Reporting and Prevention (NCC MREP), Medication error is an event that harms and harms patients as a result of improper drug service when drugs are under the supervision of health workers or patients. The method used is descriptive observational and retrospective observation of data by prescription Desember 2022 – Januari 2023. The results showed that in the administrative aspect, all prescription sheets were found to be incomplete with the writing of the room or unit of origin of the prescription and gender while all prescriptions were completed with the writing of the patient's name, doctor's name and date of prescription writing. In the pharmaceutical aspect, incomplete writing of drug strength was found in 183 prescriptions, dosage forms in 169 prescriptions and the number of drugs in 71 prescriptions, while in 188 prescriptions complete writing of rules or how to use drugs was found. In clinical aspects, drug interactions were found in 71 prescriptions out of a total sample of 190 prescriptions. Based on the results of research conducted on prescription sheets from general poly and dental poly, it can be concluded that there are still incompleteness in writing prescriptions.
