

## **ABSTRACT**

### **HIGH ALERT DRUG MANAGEMENT IN JEMURSARI ISLAMIC**

#### **HOSPITAL SURABAYA**

**Esa Anjalasari**

*Drug management includes planning, procurement, receipt, storage, distribution, destruction and withdrawal , as well as recording and reporting. There are types of drugs that require special treatment, namely the High Alert class of drug. Drugs that are included in the High Alert catgoriy include LASA (Look Alike Sound Alike), Concentrated electrolyte liquids and cytostatics. The data collection techniques used were observation, interviews and document review. In managing High Alert drugs there is a special way to store these drugs. Where the storage of High Alert drugs is done by giving a special sign in the form of a red stisker that writes High Alert and Double Check. Based on the results of the research that has been done, it can be concluded that there is a discrepancyin the storage section. It is recommendedto store High Alert drugs by attaching a High Alert a High Alert sticker or red LASA on the secondary packaging of the drug, a sticker that reads “Dilute First” on a concentrated electrolyte solution and the addition of a Multiple Strength sticker on a High Alert drug with a double dose.*
