

## **ABSTRACT**

### **MANAGEMENT ANALYSIS OF HIGH ALERT DRUG AT HOSPITAL dr. MOHAMMAD ZYN SAMPANG**

**Wardatul Imaniyah**

*Drug management is a series of activities that aimed to ensure that drugs are available in hospitals so that they can support the implementation of quality patient services in hospitals. Some drugs that require special attention in their management are high alert drugs and cold chain vaccines. The purpose of this study was to determine the management of high alert drugs in RSUD dr. Mohammad Zyn Sampang Regency. This was a qualitative descriptive study. The data was collected through observation, document review and interviews. There were 4 informants involved in this study, they were IFRS head pharmacist, pharmacist on pharmacy and therapy committee, pharmacist for managing pharmaceutical supplies and pharmacy technician in pharmaceutical services. Based on the results of the study, it was found that there was a discrepancy in the storage of high alert drugs with applicable requirements, such as the inappropriate arrangement of LASA drugs, labeling of high alert drugs that had not been maximized and the area of storage space at UPF was inadequate. The distribution requires more caution in the service of high alert drugs but is not supported by an adequate number of human resources. It is recommended to carry out storage in accordance with applicable regulations and it is necessary to increase the number of human resources so that pharmaceutical service activities are carried out properly.*

**Keyword :** *drug management, high alert medications*
