#### **THE ROLE OF PHARMACEUTICAL TOWARDS COMPLIANCE WITH DRUG DRINKING IN HYPERTENSION PATIENTS**

*Hypertension is a disease that requires long-term therapy so that compliance is required in undergoing treatment to control blood pressure and reduce the risk of complications. Uncontrolled hypertension can lead to various complications. Non-adherence to medication is one of the causes of uncontrolled hypertension. Family support and the high role of pharmacists are factors that can affect patient compliance in carrying out hypertension therapy. This study aims to determine the effect of the relationship between family support and the influence of pharmaceutical counseling on adherence to taking antihypertensive drugs. There is an effect of pharmaceutical counseling on the level of adherence to taking medication for hypertensive patients. Family support and the role of health workers are related to compliance with hypertension sufferers in undergoing treatment.*

*This study aims to determine the effect of the relationship between family support and the influence of pharmaceutical counseling on adherence to taking antihypertensive drugs. This study was conducted by summarizing 3 articles related to the role of pharmacy on medication adherence in hypertensive patients. The results of the search for articles, it was concluded that in the first article that family support and the role of pharmacists had a significant effect on adherence to taking antihypertensive drugs.*

*Keywords: Hypertension, compliance, family support, the role of pharmacists*
